

Internship Assignment

Build a RESTful **Task Management System** using Django and Django REST Framework. The objective is to support full **CRUD operations** of TODO tasks with **title, description & date**. It should implement the different Django views and models to cover the acceptance criteria in the assessment context:

- Add a task with title & description (POST /tasks/)
- List all the tasks (GET /tasks/)
 - Sorted by date. (/tasks/?sort_by_date=true)
 - Search by Date (/tasks/?search_date=%date%)
 - Search tasks by title (/tasks/?search=%title%)
- Delete a task (DELETE /tasks/{id})
- Edit a task (PATCH /tasks/)

Instructions:

Follow these steps for submission:

- Fork the repository in your github/gitlab account from <https://gitlab.com/aman.goel/django-tasks-assignment#>
- When done, Test if all task requirements are met and instructions followed
- Run the server via **Docker compose**
- Create MRs and merge into main branch
- Test the endpoints using [POSTman](#)
- Push code to your repo with proper commit messages.
- README.md should include instructions like how to setup and run the project
- Also add documentation for necessary information like commands, viewsets, serializers and respective url names.
- Repo should not contain irrelevant folders/files like cache files, build/dist directories etc.
- You can take help from Django documentation.
- Make sure NOT to use AI to get all the answers.

This assignment will test:

- Problem solving and code quality.
- Clarity of requirements and functionality by the candidate.
- RESTful API design with appropriate HTTP methods and status codes.
- Functional endpoints for CRUD.
- API design principles.
- Data modeling.
- View and serializer logic.
- Edge case handling.
- The endpoints will be tested using [POSTman](#).

Nice to Have:

It will be an advantage for candidates to demonstrate the following:

- Communication via comments in code
- Understanding of SOLID Principle.
- Each implementation should be equipped with unit tests.
- Integration tests are required to demonstrate API usages.

Duration:

The completion of the assignment is expected to be upto a day.
